Release Notes

Version 3.2 SP2

February 2018

These release notes cover the following
Chamo product versions:

Product   **Versions**

Chamo   3.2 SP2

iii innovative

Chamo

ID	Netsuite (or TSR)	Class	Release Note
CHM-6316	598811	Story	In previous versions, when you emailed the contents of the Cart, Chamo would briefly (and temporarily) display a message confirming that the email was sent. In Chamo 3.2 SP2, this workflow has been improved so that the email confirmation message remains on screen until the user dismisses it or navigates away from the Cart screen.
CHM-6352	15450410	Bug	The software displayed an unhelpful message when you attempted to log in to Chamo with a patron account that was expired. This is fixed in Chamo 3.2 SP2. The software now displays a helpful message ("Library privileges have expired") in this situation.
CHM-6328	602545	Bug	When you requested patron data via either the **GET /patrons/{id}** or the **GET /patrons/find** REST web service, the software failed to return alert or block information in the response. This is fixed in Chamo 3.2 SP2. The REST web service responses for the **GET /patrons/{id}** and the **GET /patrons/find** services now include block code data when it is present in the patron account.
